

This is a NAVAL POSTGRADUATE SCHOOL MONTEREY CA report procured by the Pentagon and made available for public release. It has been reproduced in the best form available to the Pentagon. It is not spiral-bound, but rather assembled with Velobinding in a soft, white linen cover. The Storming Media report number is A305723. The abstract provided by the Pentagon follows: The potential exists to outsource the inventory management of repairable items to the private sector. However, the Navy must be able to determine when outsourcing will benefit DoD. This research compares Navy inventory management to commercial inventory management in proposed and existing outsourcing programs and develops a model which the NAVICP can use to estimate the potential success for outsourcing repairable items. The research develops an inventory surcharge of 19 percent. The inventory surcharge represents the Navys costs to perform functions which can be outsourced and serves as a benchmark for comparison to commercial costs. The research then analyzes the costs and benefits of several successful DLA and NAVICP outsourcing initiatives. The analysis results in a model which NAVICP can use to screen repairable items to determine which level of outsourcing will succeed.
